

### Background Information

This half a million gallon (2,272m<sup>3</sup>) pool has regularly suffered from algae bloom.

Treatment plant consisted of Calcium Hypochlorite dosed via WDT Granudos 45 with sulphuric acid for pH correction controlled by Bayrol Compact.

Continuous dosing of PAC, Liquid Algaecide.

Cyanuric acid dosed by hand with great difficulty

Changed dosing of PAC, Liquid Algaecide and Cyanuric Acid to ACO, APF and NoPhos from Dryden Aqua.

### Results compared to 2015 season

2016 Season (26 weeks) was a record year for attendance.

Calcium Hypochlorite consumption reduced by over 35%

Sulphuric Acid consumption reduced by over 40%

Overall cash savings on water treatment products circa £8,000

### Operator Comments

Co. CEO, Keith Norris had nothing negative to say about his first experience of using pool water treatment products from Dryden Aqua. 'Not having to pre-dissolve Cyanuric Acid has been a bonus to a pool that, for the first time we have managed to really control algae well. The fact that we have made a huge saving in addition to being able to maintain good water quality makes it a no brainer for us to continue with the use of Dryden Aqua products and explore what other improvements they can help us with. We will certainly be introducing this regime into the children's pool for 2017'.
